

Roman Miller — Senior QA Engineer

Remote · based in Serbia · sole proprietor registered in Serbia and Russia

adm.dx@outlook.com (preferred) · +381(63)8202031 · github.com/adm-dx · pet project: [Expense Tracker](#)

Employment: full time, part time or project work. Remote only, no business trips.

Summary

Senior QA engineer with 7 years in QA across fintech (banking, payments) and B2B SaaS. I combine manual testing, API and UI test automation, load testing and release ownership.

I work in cross-functional agile teams, exchanging experience with developers, analysts and other QA engineers, and set up the QA process where testing is not yet mature. At iDWELL I own the pre-release cycle and led QA for a full UI redesign. I use AI assistants daily and am moving towards a QA Lead role.

Work experience — 7 years

iDWELL — Senior QA Engineer (Manual), release owner

February 2025 — present · Vienna, Austria (remote) · PropTech, B2B SaaS

iDWELL is a Vienna-based SaaS platform for professional property management, founded in 2017. It combines a CRM and ticketing system for property managers, a self-service app for tenants and owners, a portal for service providers and AI-driven invoice processing. The platform is used by property management companies across Germany, Austria and Switzerland and covers more than 2 million apartments.

- Led QA for the UI redesign of the web application, including cross-browser and localization testing; more than 90% of the manager cabinet has been migrated to the new design
- Owned the pre-release cycle for twice-weekly releases: full regression, final build sign-off, release notes and the go/no-go decision
- As part of a team of 4 QA engineers, launched DocFlow, which automates splitting and delivery of documents to residents: one upload replaces manual distribution to every resident of a building

- Delivered and tested the platform's AI features (AI Greta: support chat, email generation, linking emails to tickets, ticket summaries) using reference query sets and regression after every prompt or model change
- Reviewed requirements and mockups before development; investigated production incidents using logs and monitoring (Kibana, Grafana, Sentry)

Payler — QA Engineer, Manual + Automation (Senior to Lead)

July 2023 — December 2024 · Moscow (remote) · Fintech, payments

Payler is a payment service provider that has operated since 2014: online acquiring and payment acceptance for e-commerce, as an official service provider of Visa and Mastercard. It now positions itself as a fintech platform for business finance, with accounts, payments, payment acceptance and corporate cards.

- Built the test strategy from scratch for a new product, a bank for small and large businesses, as the only tester in an agile team, including regression and smoke suites
- Built the test automation pyramid from scratch at the API and UI levels: Python, Pytest and Playwright, integrated with Qase and the internal test framework
- Ran load tests with JMeter (open and closed workload models) to find throughput limits and bottlenecks and to confirm non-functional load requirements
- Mentored and onboarded testers from other teams, reviewed their test cases and autotests, interviewed QA candidates, distributed testing tasks and estimated testing effort

Raiffeisenbank — QA Engineer, Manual + Automation (Middle to Senior)

July 2021 — July 2023 · Moscow · Banking

The only tester in an agile team building software that assesses the risks of working with the bank's counterparties.

- Built integration and end-to-end UI test layers from scratch on top of existing unit and stubbed API tests: PHP Codeception for the backend, integration tests for Java microservices, Playwright and TypeScript for the React SPA
- Set up all test suites to run at different stages of the GitLab CI pipeline, with reports uploaded to Allure TestOps and to Jira Zephyr (Adaptavist) via API
- Built a mock server in Java for ActiveMQ message queues using LLM-assisted development; extended the Python (Flask) mock application for REST API services

- Ran load tests with k6 to determine maximum throughput, locate bottlenecks and verify non-functional load requirements
- Investigated production incidents and worked with the preview cluster in Kubernetes: logs, pod consoles, resource monitoring, release reinstalls with Helm
- Kept test data and team instructions up to date and ran demos for business customers (product owner, business analyst)

Rosbank — QA Engineer, Manual + Automation (Junior to Middle)

August 2019 — July 2021 · Moscow · Banking

- The only tester in two agile teams (10+ developers, 2-week sprints)
- Manual component, integration, system and regression testing of partner agent accounts for the mortgage business and of the Rosbank.DomPro mobile application
- Maintained and extended automated regression for the lead generation and mortgage application platform (BDD, C# + Selenium + SpecFlow)

Earlier experience — Technical support, from dispatcher to team lead

2012 — 2019 · IT support for retail chains (Zwilling, KitchenLand, Mango, New Yorker, Adidas): grew from dispatcher to team lead, supported stores and opened new ones as an on-site engineer.

Skills

- **Testing:** test strategy, functional, regression, integration, API and UI testing, cross-browser and localization testing, requirements review, test design, release management, mentoring and interviewing
- **Automation:** Python, Pytest, Java, TypeScript, Playwright, Codeception (PHP), Selenium WebDriver, CI/CD integration
- **Load testing:** k6, JMeter
- **API and messaging:** REST, SOAP, JSON, XML, Swagger, Postman, Kafka, RabbitMQ, ActiveMQ
- **Tools:** Jira, Confluence, Zephyr, Qase, Allure TestOps, GitLab CI, Bamboo, Kubernetes, Helm, Git, Linux, Kibana, Grafana, Sentry, SQL (PostgreSQL, Oracle: procedures and views)
- **AI tools:** Claude Code, LLM-assisted test development, testing of AI product features

- **Process:** Agile / Scrum

Education

- The Open University (UK) — Computing & IT, in progress
- Humanitarian College of Innovative Technologies — Management, IT Manager, 2006, incomplete
- Courses: Java for Testers (software-testing.ru, 2020), Java Core (JavaRush, 2019)
